WILLIAMS PUMP PONTOON For Floating Effluent Pumps & Stirrers

The **Williams Pump Pontoon** is a multi-drum float which allows the positioning of effluent pumps and stirrers on effluent ponds and concrete tanks.

The advantages of using a pontoon to float the effluent pump is that it will pump from a set depth, floating on the surface of the pond. The level of the effluent in the pond does not alter the performance of the pump. The standard set-up will cater for all types of effluent pumps from 5hp to 30hp. The pontoons are attached to the edge of the pond or tank by either a boom or guide. The option of a guide or legs ensures that the stirrer does not hit the bottom of the tank.

6 Drum Pontoon with pump, stirrer and boom system in a pre-cast concrete tank.

- Multi-drum float
- Allows the positioning of effluent pumps and stirrers on effluent ponds and tanks
- A floated effluent pump will pump from a set depth
- Pontoons float on the surface of the pond
- Caters for all types of effluent pumps from 5hp to 30hp
- Boom contains 76mm O.D. effluent pipe & 35mm O.D. service pipe for electrics

- 3 to 10 metre boom lengths
- Available in 4 or 6 drum configurations
- **NZ Designed and Manufactured**
- **Neat and tidy, simple to use**
- **Built to last**
- **Cost effective**

WILLIAMS PUMP PONTOON

For Floating Effluent Pumps & Stirrers

The boom attachment has a swing-around bracket system for easy servicing e.g. greasing of pump. The booms come in options of 3 to 10 metre lengths. It is of a ladder type construction which has a large 76mm O.D. effluent pipe and a 35mm O.D. service pipe for electrics.

A feature of the Williams pontoon is that it is available in 4 & 6 drum configurations with brackets available for a range of pumps and stirrers.

In smaller tanks there is a vertical guide system which also supports the pontoon when pumping out.
